Biden's radical climate agenda wants to keep you unplugged – May 3, 2023

Fossil fuels are what makes most of the electric power plants in America work. No team Biden wants to shut them down.

Does the radical climate change agenda know no end? Earlier this year, it was gas stoves – and then lightbulbs.

Then, a few weeks ago, President Joe Biden's administration announced much less gas cars after 2032. Even though about half of Americans say they don't want an electric car and only 6% of drivers are buying them.

But that was child's play compared to the latest Biden scheme to shut down as many as half our electric power plants across the country. These are the plants that charge those Tesla batteries and cellphones. They also keep the lights on in our factories, schools, hospitals, stores, and homes and power the internet. Further, they cook our food and keep us warm at night. No, that power doesn't just come magically from the socket in the wall.

Climate crisis deniers target scientists for vicious abuse on Musk's Twitter – By Anna Fazackerley, May 14, 2023

Abusive, often violent tweets denying the climate emergency have become a barrage since Elon Musk acquired the platform, say UK experts.

Some of the UK's top scientists are struggling to deal with what they describe as a huge rise in abuse from climate crisis deniers on Twitter since the social media platform was taken over by Elon Musk last year.

Since then, key figures who ensured "trusted" content was prioritised have been sacked, according to one scientist, and Twitter's sustainability arm has vanished. At the same time several users with millions of followers who propagate false statements about the climate emergency, including Donald Trump and rightwing culture warrior Jordan Peterson, have had their accounts reinstated.

Climate scientists say the change has been stark, and they are fighting to make themselves heard over a "barrage" of often hostile comments.
