Human - AI relationships

In a world where ChatGPT answers to 2.5 billion questions a day, it isn't really surprising that humans get attached to their favorite chatbot. Some people form extremely deep bonds with them and Wilkins explains why in their 2025 article published in New Scientist while The Los Angeles Times 2023 cartoon by Gray highlights the empathy (that) chatbots seem capable of offering. In their 2025 Nature paper, Gabriel et al stress that these relationships call for new ethics surrounding AI. The article published in 2025 by Wade in Dazed showcases the negative reactions that humans can have towards AI and AI users. To what extent are human-AI relationships double-sided?

There are several reasons why people form such strong bonds with AI chatbots. First, the Dazed article mentions how millions of people rely on AI in their everyday life. Chatbots are becoming omnipresent companions in our lives. Wilkins explains that there are scientific proofs that we interact with AI in a friendly way, just like we would with humans. we
