

TITLE

- Science in the UK : an ascent or a downfall ?
- Is the UK government killing scientific development ?
- What future for scientific research in the UK?

INTRODUCTION:

Hooks :

- Science plays a major role in industry and development, in particular in the UK, which is facing many challenges in this field.
- After Brexit, UK researchers have been excluded from European projects and the country's scientific development has suffered.

Sources :

This is illustrated in a 2025 Guardian article (Doc1) on science in post-Brexit UK, alongside a 2026 Financial Times piece (Doc2) on the future of the British space industry and another 2026 Guardian article (Doc3) on worrying science budget cuts—which a 2025 BBC graph (Doc 4) contradicts

Key Questions :

The documents raise the question of whether the UK is shaping its scientific research field for better or worse

Is the UK's economy a driving force for or an obstacle to science ?

Is the UK government's approach to science really helping scientific projects?
