## What New Love Does to Your Brain

**Main point :**

The article explores how falling in love profoundly affects the brain and behavior.

The article focuses on love, its origins and its significant impact on people's brains (Mehdi)

**Wrap-up :** "All in all, the article suggests that although love is often seen as a uniquely human experience, it may actually be closely connected to our animal nature and evolutionary instincts."

# What New Love Does to Your Brain

## Main Idea

This article shows what scientists think are the causes and consequences of new love on the brain.

This article shows/confirms that new love consumes our thoughts and emotions and impacts the way we act

## Summary

- **NEW** love → humans act out of character (= in a surprising way)
- SO scientists are trying to understand → They CONFIRM that sth does happen in the brain
  - MRI shows new love activates the same regions of the brain as cocaine → kind of addiction
  - Not associated w/ thinking (≠rational)
- RESULT
  - People in new relationships may **struggle to focus** on anything else.
  - ALSO / MOREOVER → they overlook their partner's flaws, contributing to the "love is blind" phenomenon.
- Conclusion → normal evolution of the species → necessary to bond and mate

## Wrap-up

All in all, love is but a natural/biological phenomenon that helps humans to grow/keep going.
