

S- : titrage indirect.

Ex 1:

Il s'agit d'un dosage en retour car on dose l'eau de I_2 :

$$n_{\text{I}_2, \text{titre}} = \frac{n_{\text{S}_2\text{O}_3^{2-}} |_{\text{eq}}}{2} = n_{\text{I}_2, \text{ini}} - n_{\text{I}_2, \text{réagit par (1)}} \\ = n_{\text{I}_2, \text{ini}} - n_{\text{C}_6\text{H}_8\text{O}_6, \text{ini}}$$

$$\Rightarrow [\text{C}_6\text{H}_8\text{O}_6, \text{ini}] = \left[n_{\text{I}_2, \text{ini}} - \frac{n_{\text{S}_2\text{O}_3^{2-}} |_{\text{eq}}}{2} \right] \times \frac{1}{V_0} \\ = \left[0,005 \times 10 - \frac{0,01 \times 6,4}{2} \right] \times \frac{1}{V_0}$$

$$[\text{C}_6\text{H}_8\text{O}_6, \text{ini}] = 1,8 \cdot 10^{-2} \text{ mol} \cdot \text{L}^{-1}$$

$$\text{Or } m_{\text{C}_6\text{H}_8\text{O}_6, \text{dosé}} = [\text{C}_6\text{H}_8\text{O}_6, \text{ini}] \times V_{\text{jus}} \times M_{\text{C}_6\text{H}_8\text{O}_6} \\ = 1,8 \cdot 10^{-2} \times 55 \cdot 10^{-3} \times 176$$

$$m_{\text{C}_6\text{H}_8\text{O}_6, \text{dosé}} = 0,17 \text{ g.}$$

Ex 2:

Dosage indirect car on titre I_2 formé lors de (1)

$$n_{\text{I}_2, \text{titr}\bar{e}} = \frac{n_{\text{S}_2\text{O}_3^{2-}}}{2} \Big|_{\text{eq}} = \frac{n_{\text{Ce}^{2+}}}{2} \Big|_0$$

$$\Rightarrow [\text{Ce}^{2+}] = \frac{[\text{S}_2\text{O}_3^{2-}] \times V_{\text{eq}}}{V_0}$$

$$= \frac{0,1 \times 9,9}{10} = 0,099 \text{ mol/L} = [\text{Ce}^{2+}]$$

soit $n_{\text{Ce}^{2+}} = 0,099 \times 50 \cdot 10^{-3} \times 63,5 = 0,31 \text{ g}$ de la 50ml
 donc de la 1,3g

$$\Rightarrow \% \text{Ce}^{2+} = 24\%$$

\Rightarrow cohérent avec l'étiquette.
