Expression key: M= method, E= English

+M good idea, good link, good example	-M unclear, wrong, copied from text
+ E a complex form well used	-E simple mistake **-E** the most serious mistakes

-E 1. Conjugation, pronouns
-E 2. adjectives are invariable / each + singular/ this-that-these-those/ to-for / who-which

* = difficult to read = refer to a document = reformulate

KEY WORDS
findingS / ø AI + singular / ø AI capability / THE internet / Hugging Face

Question 1: = 4 sentences (87 words). Put these in the right order from 1-9:

a) indeed, both the quality and quantity of the findings are impressive:
b) in resolving some of the Millennium Prize Problems.
c) it showed how far AI capability has advanced.
d) not only are they very complex, but they also concern many mathematical subfields,
e) — some of which were worthy of winning the Fields Medal —
f) such as algebra and topology.
g) the progress in AI capability will challenge mathematicians in years to come
h) these findings are a significant step forward
i) when OpenAI published 350 findings to mathematical problems in one day,

Question 2: Charles

AI is an extremely powerful tool that we can use in many aspects of our lives, from understanding the world to solving mathematical problems, yet it can also cause great harm. To what extent can we allow AI to develop? What are its benefits and its risks?

First of all, it is great that AI is now as clever as scientists. We can hope that it will help find cures for diseases and fight global warming. Indeed, if we let AI develop freely, it could help us overcome many of humanity's problems.

However, as we have recently seen with the hacking of Hugging Face, AI is now going rogue. If we do not make the right choices quickly, Terminator will become a reality. It is essential that human beings stay more intelligent than AI. Limits to its development is thus essential — even the CEO of Anthropic said so. Governments must act to slow down AI development to make sure everything is under control. Ordinary citizens need to have their say too.

To conclude, AI is as threatening as it is useful. To face up to this dilemma, governments and citizens should act now. (193 words)

Thème

"Have you been here for a long time, Paul?"
"Three years."
"Do you think you'll leave some day?"
He had put his newspapers back in his briefcase. He calmly closed it again.
"No, I don't think so. I could if I wanted to. But I don't feel like it."
"Do you mean you prefer to stay here?"
"Yes, that's it. I'm fine here."

It was true that he looked fine. Those who know wars say that you can tell who is going to die and who is going to survive, just by looking at the soldiers' expressions. Here, it was the same thing. I knew that Paul would stay there till the end of his days. That was just the kind of thing he would do. What went on in the outside world did not interest him and did not attract him, but it did frighten him.

"Have you ever been married?" I asked him
"No, but I did live with a woman for a year. That was a long time ago."
